Article on 'Nature Conservation' (celebrating World Nature Conservation day, 28th July, 2020)

Earth is a wonderful living planet of the Universe. Our Earth provides us with food, shelter all the requirements that we need to live a life. Each day we produce lots of waste and pollution which degrade the quality of resources. we have been using these resources in the most inhumane manner. thus, it is our duty to keep the mother Earth clean and green. therefore the system of sustainable development needs to initiated so as to preserve the resources and use it wisely. in this way, we can at least give our little efforts in saving our earth. We need to conserve nature because all the things of nature are limited. If the natural resources are abused and harmed by us then the shortage of the source will occur. For this reason, we will be harmed. If we think about nature we will see all the things around us like trees, river, water, land, pond, animals, etc. are included with nature. It means all the natural resources need to conserve rather than the environment or the ecosystem will be harmed. As a result, human also a part of nature. Without conserving the natural human will not be able to live a long life. In this country, the population is increasing day by day and for their livelihood, they are cutting trees and killing animals. As a result of the population facts, our resources are increasing day by day. We need to save nature for every step of our life.

Conservation of nature is basically the conservation of resources such as air, water, sunlight, land, vegetation, animal life and minerals. All these resources are obtained from nature without any interference from the mankind. These resources are further employed to produce various things that make the lives of human beings as well as other living beings comfortable.

Nature is not merely important for man; rather it is indispensable for him. On this World Nature Conservation Day, let's take the pledge to conserve NATURE, which is the source of our life.

## ENVIRONMENT

The Environment with its beauty

All so country to measure

Fish and whale in the deep blue water

Life in the sea, so alive

Greenland and forest with tropical life

Cold, freezing mountain peaks

And hot, living deserts

Life among the trees and meads, so alive

Sky so blue with air so clear

Only swans, moose and stars to see

Eagles and vultures take their turn

Life in the sky, so alive

Chitra Abrol, IV Shivam

## LOVELY AS A TREE

I think shall never see,  
A poem lovely as a tree.

I like to see a pink flower,  
But I don't like to see plucked flower.  
I like to hear the bird's rhymes,  
But I don't like to do crimes.  
I like to see plants increase,  
But I don't like to see plants decrease.  
To plant a tree we take more time,  
To destroy a tree we take less time.  
To destroy a tree we take less time.  
Save trees for our generation.

🌱 Poem - Save Plants 🌱

Cut me not, cut me not

Look around you, the earth is not

grow more trees, 🌱

If you want to pollution free,

Plants give us fruits and vegetables

And oxygen to breathe

Please do not cut trees 🌱

Make your earth green

**CLASS TEACHER – MRS. ANIKA KHATRI**

Mountains, trees, rivers and thousands of creatures were there,  
Greenery all around and there was no fear.  
There was no human existence at that time,  
Perhaps, everything was fine.

Then came the human race,  
And tried to change the Mother Nature's face.

They turned everything upside down,  
Converted green forests into concrete towns.

They polluted soil, water and air,  
Resulting global warming, a thoughtful affair.

They disturbed many life cycles and started ruining earth's features,  
Initiated feeding on various animals and vivid little creatures.

All natural resources became very less,  
For mother earth, it's like a big stress.

To fulfill their needs and desires, And to rule the universe they blaze the fire,  
Of hunger, greed and animality, but they have forgotten the reality.  
That human only, don't own the nature,  
Rather they share it, with many other creatures.

But Mother Nature is very good teacher, to revive its beauty, it has trigger,  
The reset button, to again create the heaven,  
On this very earth, so that humans could realize the mission behind their birth.

To serve the humanity and offer god their gratitude,  
Live and let others live with right attitude.

### *The Mystery of an Ancient Cave*

*Once upon a time, there was a village. It was near a cave. It had a magical potion. The interesting fact was, if that potion fell on the floor, the floor would fly. However, reaching the cave wasn't very easy.*

*There was a Goddess. She took care of that potion. Whenever any human dared to go inside the cave, a big wall of fire originated. There was a secret door behind the cave. If one entered from one side the other one can go in the cave. But that was almost impossible as the Goddess could see the future.*

*One night a man named Suresh tried to enter the cave as his daughter was ill. The magic potion was only one which could cure her. At night, the Goddess could not see the future because of a sage's curse. One could only get the potion if one defeated the Goddess.*

*Suresh was able to defeat the Goddess. But that potion fell here and there and the floor didn't fly. Long ago, some people who could not defeat the Goddess were trapped into the potion. Those people were also freed.*

## The Cradle of Humanity

Life first started about 3.8 billion years ago. Our journey starts in southern Africa, where fossils of the first ever life was found. Southern Africa have some of the yielded fossils of some of the earliest dinosaurs going back about 200 million years ago. With this we can say that Africa is the birthplace of humanity. It lies in the Gauteng province with a small stretch into neighbouring north west province. If you know very little about the starting of Humanity, probably that is 'The humanity started from Africa'. Located in Gauteng, the Cradle of Humankind is one of 10 Unesco World Heritage Sites in the country, the richest source of hominid fossils, and the place where they found *Australopithecus africanus* in 1924. The Cradle of humanity comprises a strip of dozens of dolomitic limestone caves with the fossilized remains of the ancient form of animals, plants and most importantly, Human beings(hominids). These caves are one of the longest, most continuous palaeoanthropological dig sites in the world, with a surplus of fossils still being found. It was here in 1947 that they found 'Mrs Ples', the only near-perfect, pre-human skull ever excavated. And later, in 1997, they dug up the 3.5-million-years-old 'Little Foot', a full hominid skeleton.

# Amazing Facts

## *WATER, WATER, EVERYWHERE*

- ❖ SOUND MOVES FOUR TIMES FASTER IN WATER THAN IN AIR.
- ❖ A CAMEL CAN DRINK 500 CUPS {118 L} OF WATER IN 10 MINUTES.
- ❖ A BULL SHARK CAN SURVIVE IN SALT WATER AS WELL AS FRESH WATER.
- ❖ A FEAR OF THE OCEAN IS CALLED THALASSOPHOBIA.
- ❖ OUR BRAIN IS 70% WATER.

#### Day by Day

Population is growing day by day;  
Don't know what to say.  
Unemployment is increasing day by day;  
People have no food sad to say.  
Our Earth is losing its resources day by day;  
So sad! Our Earth can't say.  
People are dying day by day;  
Don't know what to say.  
Pollution is increasing day by day;  
People are having health problems sad to say.....

#### **EFFECT OF CORONA VIRUS ON STUDIES**

The corona virus SARS-COV-2 causes a deadly disease, COVID-19 with a fatality rate between 2-3%. It has created havoc as it has engulfed the whole world, being declared a pandemic by the WHO. Lockdowns that have been imposed in almost all countries to save the citizens from infection. The disease has not spared even the advanced European countries. Our Indian education system has been badly affected by the entry of the disease. All the schools, colleges and educational institutions are closed because nobody knows when the situation will be normal. It is a fact that educational institutions are most vulnerable for the spread of the disease due to the mass gathering in the classrooms. So it is difficult to bring back the students to the schools, colleges and universities.

So today many schools are having online classes for students. Teachers are doing their best efforts for students. But sometime some children face problems like children have no computers, smart phone etc. Many exams have either been postponed or cancelled. C.B.S.E also reduces the syllabus due to COVID – 19.

Many online educational platforms have been advertising free educational - tools for students. Thus, students and teachers both are doing their best to get better education.
