कोरोना : खट्टा मीठा दौर

यह दौर भी गुजर जाएगा
वक्त के पल्लों पर अपने निशा छोड़ जाएगा
बेपर, बेफिक्र उल्टे पहिरो को
फिर धरा से जोड़ जाएगा।

चाय - कॉफी के साथ चटपटी बातें होंगी
दिल के बंद डिब्बे से चादें आजगद होंगी।
पूरा परिवार एक साथ होगा
बच्चों - बड़ों में कोई खेल नया होगा।
सभी का बचपन लौटा कर जाएगा
हैं! यह दौर भी गुजर जाएगा ॥

बंद हर गली, हर बाजार है,
पिंजरे में कैद सारा संसार है।
खौफ के साए में हर जीवन है
पर हर दिल में एक आशा की किरण है।
उदासी का यह बादल दूर जाएगा
धीरज रखो! यह दौर भी जाएगा ॥

A cat's tail contains nearly 10 percent of all bones in the body.

Let's have a Chuckle

In a chemistry class-

Teacher: Children Bose-Einstein Condensate is the fifth state of matter.

Sonu: Ma'am is it made of chemical Bose and Einstein?

Teacher: No, they are the names of the people who made it.

2 days later

Teacher: Sonu tell me what will happen if Bose was not present in the making of Bose- Einstein Condensate?

Sonu: Nothing ma'am. No chemical named Bose is needed in its making. You only told us!!

JAW DROPPING FACT ABOUT HUMAN CELLS

There are about 200 different types of cells in the human body, including those in the skin, muscles, nerves, intestines, blood and bone.

There are more nerves cells in the brain than stars in the Universe. The Brain is estimated to have over 100 billion neurons (also called brain cells). Multiplying 100 billion neurons with 40,000 times of a synapse is equivalent to the brain having more connections or neurons in it than there are stars in the universe.

According to Edison, blood vessels of human child which contain the blood cells, if laid down end to end will cover around 100 thousand miles (approx.) that is 2 or 2.5 times (approx.) a trip around the earth. The number of blood vessels in a human adult would circle our planet 4 times that is 160 thousand km.

The DNA out of the nucleus of all the cells of our body (1 person) if put end to end, would reach the sun and back over 600 times.

An Adult human being of an average weight of 70kg has 7×10^{27} atoms. Another way of saying this is "SEVEN BILLION BILLION BILLION". Of this, almost $2/3$ is hydrogen, $1/4$ is oxygen, and about $1/10$ is carbon.

Everyday an adult human being produces 222 billion to 242 billion new cells (average human body) and also 300 million old cells die in the human body every minute with 30 thousand to 40 thousand skin particles getting shed every hour. In 1 year, 1 person sheds more than 8 pounds (3.6 kilogram approx.) of dead skin. Over a 24-hour period, one loses almost a million skin cells.

PLEASE SANTA, PLEASE

Santa clause, please
Do not bring toys or candies,
Please Santa please I am on my knees.

This time you come and bring some humanity,
Above Hindu, Muslim, Sikh and Christianity.

See Santa, some grandparents,
Are living in old age homes.
Can you please create a bond of love with,
Little one's dad and mom.

This time you come and bring big big trees,
We are suffocating...
Please Santa, please I am on my knees.

This time you come and bring big big smiles,
Everywhere in this world, we are hearing cries.

Especially in India you come with beautiful dolls,
Some people think that, baby girls are thorns.
Tell them all baby girl is a gift from god,
She is not a thing to throw aside a road.

Santa please do not bring toys or candies,
Please Santa, please I am on my knees.

THE SEARCH FOR ENVIRONMENTAL JUSTICE

Mother Nature has blessed us with numerous things including the Air we breathe, the water we drink, the Sunrays that reach us, and the food that we consume every day. So, it becomes pertinent that we understand the value of our ECOSYSTEM. World Environment Day is an appreciation of an extremely necessary and relevant idea to conserve the Planet and nature. This year's World Earth Day theme is "CELEBRATE DIVERSITY".

Biodiversity means the variety of plant and animal life in the world or in a particular habitat, a high level of which is usually considered important and desirable.

World Environment Day is celebrated worldwide on 5th June.

Right from the world fighting a pandemic and most countries are in lockdown, the environment seems to have benefited slightly. Over the years, we have witnessed the repercussions of environmental destruction. However, the Covid-19 pandemic, which has brought the world to a standstill, made us realize what happens if we fail to respect the laws of the nature. Man has been due to the Mother Nature. Covid-19 lockdown imposed on throughout the world has struck a chord in every one of us and made us thinking that how nature is so important for our day-to-day living.

The long-term improvements in the nature have made us believe that the Earth can be saved. The Covid-19 pandemic has revealed the vulnerability of humans and taught us a series of life lessons. Nevertheless, every cloud has a silver lining. The threat of pandemic, the pain of being in lockdown and being deprived of daily economic activities, has also led to some positive developments. The only positive thing that has emerged during these trying times is the positive impact of decreased human activities on the nature. The Earth, now, seems to be healing. It looks like a pandemic and a lockdown have mandated that the nature also needs to breathe and catch itself a life. Now, the biggest challenge is that post the pandemic, we continue to respect the environment and maintain whatever life it has decided.

This year's theme of Biodiversity is a call to action to combat the accelerating species loss and degradation of the natural world. The recent outbreak of novel corona virus pandemic has stressed the interdependence of humans and the natural life, in which they exist. It has underlined the fact that when we destroy biodiversity, we destroy the system that supports human life. The needs of the humans can be fulfilled only if we live in a Biodiversity. The world isagoning to the COVID-19 pandemic has drawn every effort and solidarity to tackle pressing issues that threaten our safety. As countries start to plan ways to build back better, getting nature at the heart of all decision making for people and the planet must be our top priority. World Environment Day is a reminder that we need to conserve the planet and nature. You can start by taking some home steps to reduce the number of resources consumed and waste that is generated. As humans consumption is inevitable, but consuming with care is one thing that can be practiced. Our individual actions may seem small but they help to conserve our environment as a way – *Keep Green Spaces Alive, Keep DR's, Recycle Daily Wast*

EVIL ALLURES BUT GOD ENDURES

There lived in an old country, as
old as time, a noble and generous man. The slaves prided themselves of their master.
They considered him the best master under the sun as he fed their families and
provided them with clothes.

There lived another man, but not
generous or kind. He was vexed to hear such works of praise for the master. He
bribed one of the slaves, Dom. He asked Dom to incite other slaves against the
master. Dom did the mischief. He tried to prove for their master was good to
them because they were good to him. "He repays those who are against him,
whether good or not, by killing their families", Dom said. The other slaves
opposed Dom.

Dom pledged to make the master
angry, so he could show the other slaves his real face. Once the master was strolling
around his territory showing his guests his lambs and ewes. While he had went
to show his special twisted horned ram, Dom rushed a wolf towards the ram. And
as the master could only watch, the ram was scratched to death by the wolf.
The slaves rushed and tied over the
wolf and put it into its cage. The visitors and the slaves cried over the death
of the master's ram's death.

The devil was set up on the oak tree
just by the farm in the shadow and watched the whole scenario. He was happy
that Dom had done his job rather very cleverly. The master raised his eyes towards
Dom, politely saying "Dom, you should be careful about your job, whatever it
is. The wolf could have killed you. However, I am rather sad for my ram's
death." He set Dom free and returned to his house. The Devil grinding his
teeth, fell off the tree.

Dance to your own beat

Dance to your own beat
Row your own boat
Whatever people might say
Don't let it affect your moat.

To react is to mind
To listen is to care
Once its begun
It's a deadly nightmare.

That is why the wise have said
You need not bother
Listen with one ear
And eliminate with the other.

What people say shouldn't matter
you're the captain of your ship
Listen to your inner circle
They'll help you make a grip.

Looking in the mirror
Happiness should reflect
Negativity is all around you
But you decide its effect.

□ मुसीबतें

चारों तरफ हैं मुसीबतें ही मुसीबतें.
समाधान की कोई आस नहीं है।
इनमें फसे मनुष्य को
चैन की एक सांस नहीं है।

मुसीबतों में फसा इनसान.
बेबस और लाचार है।
जीत कहीं नजर नहीं आती.
केवल हार ही हार है।

मुसीबतें हर किसी की जिंदगी में आती
हैं।

दुःख भी साथ लाती हैं।
पर कोई माने या न माने,
कुछ न कुछ सिखा कर ही जाती हैं।

The Rain

Cool guy knocking the door,
Wind blow with whistle sound,
Fresh air is waiting for us,
Rainy, Rainy be with us.
Sky turns to the dark
Flowers are smiling and dancing,
All over darkness hangs with us,
Rainy, Rainy be with us.
Rainy the beauty of the world
Memories of the past reminds with us,
Fog is coming to hug me,
Rainy, Rainy be with us.
Dew on the grass
Lighting of the sky
makes me feel lovely
Rainy, Rainy be with us.
Lovely sun smiling on us
Children dancing like peacock
Lover's turning to birds,
Rainy, Rainy be with us.
Farmers are so happy
Greenish nature all over the place,
Snow comes to kiss my feet,
Rainy, Rainy be with us.

- Ayush Adhikari
- Class 9th E

AMZING FACTS

Interesting Facts on Trees

1) Trees live longer than any living thing.

Nothing on Earth lives as long as a tree. Some trees, like sequoias, live only a brief time. Others, like the bristlecone pine, can live for thousands of years. The oldest tree is 4,845 years old.

2) Trees have been to space.

Apollo 14 astronauts brought with them tree seeds which were later sprouted and grew into trees. These trees were donated to state forestry services in 1975 and 1976.

3) The largest organism in the world is tree.

The single largest organism on Earth is a tree! An aspen tree, named Pando, has clones of itself spread out across more than 5 miles of forest. The word "Pando" means "I spread" in Latin.

4) More than half of all tree species exist in a single country.

Nearly 50 percent of all tree species are single country endemics, the study found, meaning each one naturally occurs only within the borders of a single nation. Brazil, Colombia and Indonesia have the highest totals for endemic tree species, which makes sense given the overall biodiversity found in their native forests.

5) Before trees, Earth was home to fungi which grew 26 feet tall.

From about 420 million to 370 million years ago, a monstrous genus of creatures named *Phanerozoites* grew huge trunks up to 3 feet (1 meter) wide and 26 feet (8 meters) in height.

6) Trees in a forest can talk and share nutrients

AMAZING FACTS

- Russia has more surface area than Pluto.
- Antarctica is the world's largest desert.
- The Eiffel Tower grows in summer due to the heat expansion of tower's iron.
- Bees can fly higher than Mount Everest.
- Earth is the only planet in our solar system not named after a God.
- The eye of an ostrich is bigger than its brain.
- There are more nerve cells in your brain than stars in the Milky way.
- You can taste garlic with your feet.
- There is a lake named Hillier in Australia which is naturally bubblegum pink.
- An average human adult has 2000 - 4000 taste buds.
- Gorillas only sleep 30 minutes a day.

The Darkness Inside

Lonely in the sun,
Lonely in sky.
I wanted the shine,
But my dark got the right.
My past is furious,
Am worried by this sight,
Finding the sun inside me,
I found the darkness bright.
I took a breath,
And leaned on the bed.
Found the light inside,
That light was not anything,
Just my negative vibe.
I went closer,
It was my dark becoming bright.
That dark was just my past,
Eating me from inside.
Pulled me towards it,
And swallowed me inside.
I tried to take the support of bed,
But I realised that it was my mental health
grabbing me from its side.
I took a breath again,
Didn't know who I am.
Running since past years in the unfortunate life,
I forgot the real woman that was inside.
-Tanisha Narang

Origin of Universe

Instead of Big Bang I have
another view,
Universe came with nothing
then how it grew?
My universe theory is
little bit new,
Universe is running on time line
which we never knew.
We are at a point that
accounts very few,
Race is in the masses
which we will review.
Few who will lose will be
important in the crew,
Losers will emit particles
which overthrew,
Universe is being created with
many big bang in a time
which is very new.
I know its difficult to chew,
but one day this theory will grow.

STUDENTS SPEAKING ABOUT
PROBLEMS/ISSUES OF SOCIETY

THE NEW LIFE

The current situation caused due to Covid-19 has overwhelmed people all over the world. The most powerful countries are the most depressed. The best tourist places got the hardest hit. Buildings, schools, offices shut but not the dreams. So what if the common ways of loving life have changed? New opportunities too have knocked the door. An opportunity to value life, appreciate even the most boring class, an affection towards the colleagues . Life has just CHANGED, it has STOPPED.

Remember the most trending content earlier : latest songs, films2020 etc. But now: motivational speeches, ways to get rid of boredom etc. But why? Have we lost all the hope? Are we bored up with the new life?

There are so many sayings : Life is Beautiful; Beauty lies in the eyes of the beholder;

We should remember that life has changed, the eyes haven't. They are still capable of finding beauty and interest in the new world.

KIRTI ARORA
